Naval Battle Groups***

***Battle Force Interoperability (BFI) Operation Advisory
Group (OAG)***

Tom Irwin

Naval Surface Warfare Center, Dahlgren, Virginia

NDIA System Engineering Conference Oct 21-24 2002

Interoperability Issues Impact BG Operations

- Battle Groups (BG) deployed with both legacy and new ships (combat/C4I systems)
- The Navy is aggressively fielding new ships, C4I systems, technologies to meet warfare needs, ie. CEC
- Legacy ships and systems still and will continue to play a critical role in BG operations
- Legacy ship C4I systems need investment to:
 - Improve Battle Force capability
 - Achieve desired mission capability
 - Optimize Battle Force performance/impact of new ships, systems and technologies
 - Allow new systems to realize design objectives

Fleet and engineer partnership needed to resolve interoperability shortfalls

BFI OAG Mission

THE DEPUTY SECRETARY OF DEFENSE

WASHINGTON, D.C. 20301

OCT 12 2001

MEMORANDUM FOR SECRETARIES OF THE MILITARY DEPARTMENTS
CHAIRMAN OF THE JOINT CHIEFS OF STAFF
UNDER SECRETARIES OF DEFENSE
DIRECTOR, DEFENSE RESEARCH & ENGINEERING
ASSISTANT SECRETARIES OF DEFENSE
GENERAL COUNSEL, DEPARTMENT OF DEFENSE
INSPECTOR GENERAL, DEPARTMENT OF DEFENSE
DIRECTOR, OPERATIONAL TEST & EVALUATION
ASSISTANTS TO THE SECRETARY OF DEFENSE
DIRECTOR, ADMINISTRATION & MANAGEMENT
DIRECTORS OF THE DEFENSE AGENCIES

SUBJECT: Command and Control (C2) Legacy Interoperability Strategy and
Milestone Action Plan

I am committed to resolving the problems of legacy C2 interoperability in an expeditious and cost effective manner. Therefore, I am establishing a goal for the Department to have legacy systems interoperable, with respect to critical command and control functions by the end of Fiscal Year (FY) 2008. The Department has worked diligently to put appropriate policy and procedures in place to achieve the level of interoperability required to effectively conduct modernized military and business operations. A revision to Department of Defense (DOD) Directive 4630.5, Interoperability and Supportability of Information Technology (IT) and National Security Systems (NSS), is necessary to clearly define the roles and responsibilities of all DOD components, to achieve the interoperability of information technology and national security systems throughout the Department. This must be coordinated and presented for my signature within 30 days from the date of this memorandum. Accordingly, I direct the following actions:

a. Under Secretary of Defense (Acquisition Technology & Logistics) (USD (AT&L)): Review the current Defense Acquisition System and define, in coordination with the CIO and the Joint Staff, additional provisions necessary to support the achievement of interoperability among systems as a life cycle responsibility. Implement required changes by March 29, 2002.

Fundamental BFI OAG Elements:

- Legacy C2 Interoperable by FY08
- Ensure PPBS considers legacy I/O funding requirements
- Develop metrics for operationally determining success in overcoming legacy C2 I/O issues

The Navy's Leadership is committed to resolving the Interoperability issues. The BFI OAG is the mechanism.

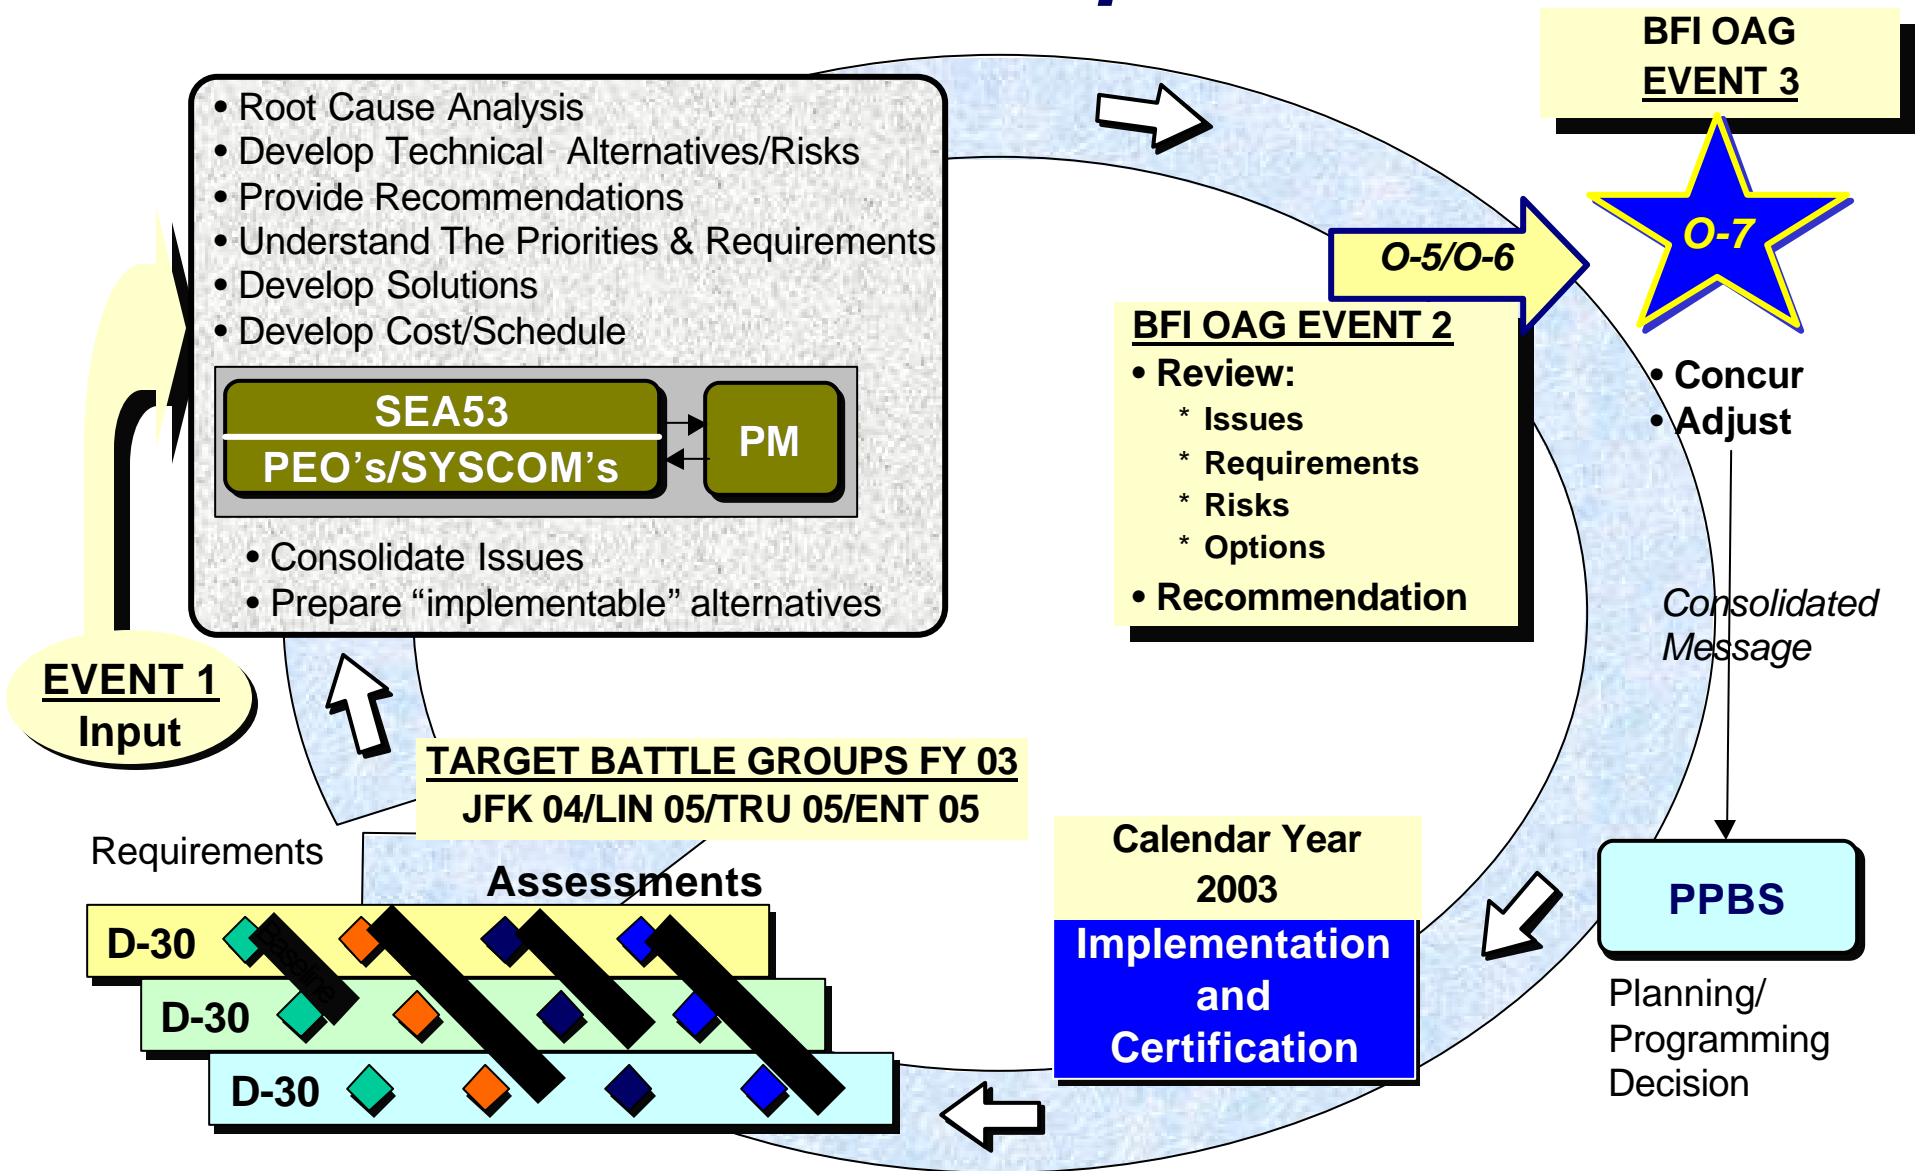

BFI OAG Approach

- Promote the use of disciplined systems engineering principles to set priorities and allocate funding for measurable incremental interoperability improvements to USN systems (initially AAW focused)
- Produce plans, measure predicted impact and implement corrections to known Battle Force Interoperability problems
 - Support DEPSECDEF C2 Legacy Interoperability Strategy and Milestone Action Plan of 12 October 2001
 - Satisfy OPNAV N76 (RADM Balisle) direction of 21 August 01
 - Satisfy Fleet direction (JFK BFIT TRR) on BFI resolution of 31 May 01
- Prioritize Top BFI issues for correction
- Impact near term Battle Force (BF) deployments

Measurable BF Interoperability Performance Improvements

Demonstration of Measurable Improvement

BFIR Metrics

- Provides:
 - Evolving AAW Force performance evaluation with respect to the war fighting interoperability requirement
 - Disciplined analysis process
 - A force performance and predictive engineering yard stick:
 - Baseline/configuration pre-deployment evaluation (via Deployment (D-30 month) process)
 - Change prioritization
 - Techniques, Tactics & Procedures (TTP) Evaluation
 - Operational Link employment feedback/guidance
 - Requirements/predictive engineering and alternative comparison
 - Seventeen BG event database (and growing) provides cornerstone to Force performance evaluation and engineering impact

 Cooperative Engagement Capability (CEC) Platforms

BFI OAG Conclusions

- The BFI OAG process works
 - A Battle Force approach to address the mismatch that occurs from introducing new technology with legacy systems
 - Making decisions based on the Battle Force “system” performance
 - Effective prioritization of limited resources
 - Allows the Fleet and engineering communities to understand the problem from a common frame of reference
- The BFI OAG Process Closes the Loop Systematically
 - Measurable interoperability improvements are being delivered today, USS CONSTELLATION and USS THEODORE ROOSEVELT Battle Groups
 - BFI OAG process continuing in support of FY 04 and beyond deployers

The BFI OAG is the Navy’s arm for improving interoperability to meet performance “mission” requirements

BACK-UP SLIDES

Analysis Process

- *MEAN* BFIR performance baseline calculated based upon 11 characteristic Increment 0 events:
 - Always includes ACDS BLK 0 for CV
 - As defined by BG composition, includes a mixed complement of:
 - AWS 5.3.7/3A.0.9.2, 2.10, & 1.4
 - E2C Group IIX & IIN
 - 10 Threat Targets per Event
- From measured BFIR event performance, calculated *MEAN*:
 - Probability of: Track Completeness, Track Coherency, Track Accuracy, TN Consistency, ID Completeness, ID Accuracy, ID Consistency; from calculated BFIR attributes
 - Probability of achieving TIQ from measured TIQ performance
- Input BFIR data into BFI Qualitative Performance Predication Tool
 - Includes SME input for:
 - Impact of each OAG Category (1-21) to BFIR attribute performance*
 - Impact of non-Computer Program issues on BFIR attribute performance
 - Calculated TIQ performance gain attributed to OAG specific changes
 - % Gain in probability of achieving TIQ
- Input TIQ performance gain into Air Defense Decision Point (ADDP) model to calculate predicated decision space improvements

*Captured AAW Mission Prioritization from MIL-STD guidance (1697A, 2167A, 498, etc.)

FY 02 BG Improvements (BGSIT Data/At-Sea Environment)

Ship Self Defense/BF Metric

Live Event Notes:

- 3 BGSITs with varying geometry
- Tracks do not follow constant inbound course
- BG Operators did not elevate ID on Hostiles above ID Unknown in Combat Systems and on TADIL
 - BG agreement on ID determined from decisions to engage
 - Assessment focus track accuracy, coherency & TN stability
- Less Objects of Interest
- Threat spacing greater in BGSIT than DEP Scenario

DEPSECDEF

Direction

- Legacy C2 Interoperable by FY 08
- Implement Strategies by 29 Mar 02
- Ensure PPBS considers legacy I/O funding requirements
- Mission critical C2 systems for the Joint Task Force
- Identify funding for the Family of I/O Operational Pictures (FIOP) as directed by the JROC
- Develop metrics for operationally determining success in overcoming legacy C2 I/O

b. Under Secretary of Defense (Comptroller): Effective immediately, ensure that the Planning, Programming, Budgeting System considers C2 legacy interoperability funding requirements. Specifically, the Comptroller in coordination with the USD(AT&L), Joint Requirements Oversight Council (JROC), and the DoD Chief Information Officer (CIO) will ensure appropriate funding for a prioritized set of overarching program initiatives beginning in FY03. Initiatives should focus on mission critical C2 interoperability for the Joint Task Force (JTF) and below; the Joint Integration and Interoperability organization; and the Joint Distributed Engineering Plant. Also, identify funding for the Family of Interoperable Operational Pictures (FIOP) as directed by the JROC. Candidate initiatives will be considered for acceleration and FY03 funding based on JROC recommendations and clear benefits to JTF operations.

c. Joint Forces Command (JFCOM): Address issues and develop material and non-material options to resolve JTF C2 legacy interoperability shortfalls. Forward recommendations to the JROC for prioritization and referral to OSD by March 29, 2002.

d. Chief Information Officer, DOD: In coordination with the USD (AT&L), the Joint Staff, and JFCOM, identify the key DoD component organizations addressing legacy interoperability, areas of duplication, and opportunities for consolidation or elimination. Provide recommendations to the JROC by March 29, 2002.

e. Chairman of the Joint Chiefs of Staff: In coordination with the USD (AT&L), CIO, DOT&E, JFCOM, and OSD(PA&E) develop initial metrics for operationally determining success in overcoming legacy C2 interoperability shortfalls. Modify CJCS Instructions, as appropriate by March 29, 2002.

f. Combatant Commands, Services and Defense Agencies: Identify opportunities for strengthening the implementation of DoD Directive 4630.5 and DoD Instruction 4630.8, Procedures for Interoperability and Supportability of Information Technology (IT) and National Security Systems. Forward recommendations to the CIO by March 29, 2002.

Please direct questions or concerns you may have to Dr. V. Garber, Director, Interoperability, OUSD(AT&L) at (703) 695-9713.

Items highlighted are fundamental elements of the Battle Force Interoperability Operational Advisory Group (BFI OAG)
